## Reproduction Door Panels

We started making door panels out of antique iron pieces over twenty years ago. Over the years we picked out some of our favourites and had a local foundry reproduce them for us in cast aluminum, which is much lighter than cast iron and also much stronger. The result is a beautiful door panel that can add both character and security either to an existing door or to a custom made one.

Since they are cast in moulds, these panels are the same size as the originals; by reframing them in steel and adding spacers and other details, and by varying the dimensions of the materials used, we can expand the size to fit most openings. We typically make these to be installed in two different ways: for doors with existing windows it is easier to mount the iron on the outside of the door using brackets that leave enough space between glass and iron to facilitate cleaning; for new doors, the iron can be set right into the door, usually flush with the face of the door, with just a little space between it and the glass. For easier glass cleaning, we also make a version on hinges so that the iron can swing open all the way. If you are interested in this type of treatment for your door, come in with the measurements and we'll see how we can make something fit. And remember, besides these aluminum panels there are many other designs and possibilities to chose from.

*Paris*: 20" x 38 1/2",  
cast aluminum

*Metro*: 22 3/4" x 38 1/2",  
cast aluminum

*Lafayette*: 20 3/4" x 59",  
wrought iron

*Toulouse*: 19" x 42 1/2",  
cast aluminum

*Iris*: 19 1/4" x 38 1/2",  
cast aluminum

*Versailles*: 15" x 42",  
cast aluminum

### TIP

When shopping for door panels, bring in your measurements. In most cases we are able to adjust the pieces you love to suit your needs. This could mean adding a wrought iron border to build out a door panel. Many clients find it handy to bring a photo of their house or front door to help picture what our door grilles will look like in place.

### Notes

**Sizing:** Measurements given are for basic panel, without framing. By reframing the panels in steel and adding spacers and other details, we can expand the size to fit most openings. (Many of the panels shown here have already been framed and extended).

**Mounting:** Panels can be installed in a number of ways depending on whether you are using an existing door or building a custom door around the iron. Talk to us about your options.

**Pricing:** Pricing varies with style, finish, final size, mounting hardware, etc., with finished panels generally ranging from \$750 to \$1250. Other Designs: In addition to our reproduction line of aluminum panels, we always have a large number of original wrought and cast iron panels to choose from.
